High-Visibility Safety Clothing

The Canadian Standards Association's CSA Z96-09 High Visibility Safety Standard details the level of performance of garment componentry and design required to meet the standard classes and levels. Layout of retro-reflective or combined-performance tape is another key part of the comprehensive standard. For more details, a copy of the Standard can be obtained at www.csa.ca.

CLASS 1

Basic harness or safety tape over the shoulders and encircling the waist. Suitable in less complex work areas where workers are separated from car and truck traffic.

CLASS 2

Full coverage of the upper torso including front, back, sides and over the shoulders. The background material must be high visibility. For use in more complex or low-light work areas requiring greater visibility.

CLASS 3

A Class 2 garment combined with arm and leg bands. The background material must be high visibility to the standard. Hi-viz coveralls meet this standard; safety jackets and pants can be worn combined, or arm/leg bands can be added to Class 2 garments, to attain Class 3. Suitable for use in complex work areas where low light, fast-moving traffic and inclement weather are safety factors.

SAFETY WORKWEAR

Disposable & Chemical Protective Wear

Chemical protective clothing is designed to help safeguard men and women from chemical hazards that can and can't be seen, such as dangerous vapors, liquids, and particles. The basic OSHA Standard calls for 4 levels of protection, A through D, and specifies in detail the equipment and clothing required to adequately protect the wearer at corresponding danger levels.

A Level A protection is required when the greatest potential for exposure to hazards exists, and when the greatest level of skin, respiratory, and eye protection is required. Level A requires total encapsulation in a vapor tight chemical suit with positive pressure, full face-piece apparatus (SCBA) or positive pressure supplied air with escape SCBA and appropriate accessories.

B Level B situations call for the highest degree of respiratory protection, but a lesser need for skin protection. Level B protection calls for SCBA or positive pressure supplied air respirator with escape SCBA, plus hooded chemical resistant clothing (overall and long sleeved jacket; coveralls; one or two piece chemical-splash suit; or disposable chemical-resistant coveralls).

C Level C protection is required when the concentration and type of airborne substances is known, and the criteria for using air purifying respirators are met. Typical Level C equipment includes full-face air purifying respirators, inner and outer chemical-resistant gloves, hard hat, escape mask, and disposable chemical-resistant outer boots.

D Level D protection is the minimum protection required. Level D protection may be sufficient when no contaminants are present or work operations preclude splashes, immersion, or the potential for unexpected inhalation or contact with hazardous levels of chemicals. Appropriate Level D protective equipment may include gloves, coveralls, safety glasses, face shield and chemical-resistant, steel-toe boots or shoes.

Flame Resistant Wear

Flame resistant clothing is made for some of the toughest jobs around and needs to be able to protect you against many potentially dangerous hazards of everyday work. Source Atlantic has access to a full line of flame-resistant clothing that workers want to wear. Our FR clothing is designed to meet the industry safety standards. Durable, comfortable and designed to keep you safe from injury.

NFPA 2112: Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire specifies the minimum design, performance, certification, and testing requirements for flame-resistant fabric and garments for use in areas at risk from flash fires.

Arc Flash Clothing

CSA Z462 Workplace Electrical Safety, developed by the Canadian Standards Association (CSA), provides a set of requirements for the practical safeguarding of individuals that are exposed to electrical hazards in the workplace. One of the main concerns that this standard focuses on is arc flash and shock along with the preventative measures that should be taken to avoid the harm caused by working unsafely.
